IN THE CLAIMS

Kindly cancel Claim 6 and amend claims 1 and 10 as follows. The status of all the claims in the case are listed below.

1. (Currently Amended) A preparation for transdermal or transmucosal administration for electroporation, ~~wherein at least one pair of electrodes for electroporation is disposed on a compound reservoir having dispersed therein a compound to be administered in a base of a solid or semisolid form~~ comprising a compound reservoir having dispersed therein a compound to be administered in a base of a solid or semisolid form, a backing retaining the compound reservoir, and at least one pair of electrodes for electroporation provided on the compound reservoir.

2. (Original) The preparation according to claim 1, wherein the electrodes for electroporation are disposed so as to directly contact with an application site.

3. (Previously Presented) The preparation according to claim 1, wherein at least one part of the compound reservoir is disposed so as to directly contact with an application site.

4. (Previously Presented) The preparation according to claim 1, wherein the base of the solid or semisolid form is aqueous.

5. (Previously Presented) The preparation according to claim 1, wherein agar is used as the base.

6. (Cancelled)

7. (Original) The preparation according to claim 6 ~~1~~, wherein the backing is cup-shaped.

8. (Original) The preparation according to claim 7, wherein a flange portion of the cup-shaped backing has an adhesive layer.

9. (Original) The preparation according to claim 8, wherein one part of the electrodes for electroporation is attached to the adhesive layer of the flange portion of the cup-shaped backing.

10. (Currently Amended) The preparation according to claim 6-1, wherein the backing is formed in a sheet shape.

11. (Previously Presented) The preparation according to claim 1, wherein the electrodes for electroporation are disposed in a comb shape on the compound reservoir.

12. (Previously Presented) The preparation according to claim 1, wherein an insulating layer is provided on at least a section of the electrodes for electroporation contacting an application site other than a section on the compound reservoir.
